

EXPERIMENT – 6

UI DESIGN REFINEMENT USING FEEDBACK FORM

Roll No. 240701253

Name: Keerthana C

AIM:

The aim is to trial different app layouts and color schemes and evaluate user feedback on aesthetics and usability using GIMP.

PROCEDURE:

Step 1: Install GIMP

- Downloaded GIMP from the official website.
- Installed and launched the application successfully.

Step 2: Create a New Project

1. Open GIMP:

- Launched the GIMP application.

2. Create a New Canvas:

- Navigated to **File** → **New**
- Set dimensions to **1080 × 1920 pixels** (mobile layout standard)

Step 3: Design the Base Layout

1. Create the Base Layout:

- Used **Rectangle Select Tool** to divide the screen into:
 - Header section
 - Search bar area
 - Category section
 - Banner section
 - Footer section
- Applied base colors using **Bucket Fill Tool**

2. Add UI Elements:

Text Elements:

- Used **Text Tool** to add:
 - App name: *GreenCart*
 - Buttons: *Next Day Delivery, Price Drop Alert, Best Sellers*
 - Labels: *Seeds, Fertilizers, Plant Care, XL Plants, Ceramic Pots*
 - Banner text: *Balcony Gardening, Create Your Cozy Space*

Interactive Elements:

- Created:
 - Search bar
 - Category cards
 - Buttons
 - Navigation footer

3. Organize Layers:

- Created separate layers for:
 - Header
 - Search bar
 - Categories
 - Banner images
 - Footer
- Renamed layers for easy editing and modification

Step 4: Experiment with Color Schemes

1. Create Color Variants:

Layout 1 – BEFORE USER FEEDBACK

- Used **bright pastel colors (pink/purple tones)**
- Header contained multiple elements (offers, icons, buttons)
- Banner text placed directly on images
- Minimal spacing between elements

Layout 2 – AFTER USER FEEDBACK

- Changed to **green-based natural color palette**
- Simplified header layout
- Improved spacing and alignment
- Added overlays on banners for better text readability
- Introduced cleaner icons and structured sections

2. Save Each Variant:

- Exported designs using:
 - **File** → **Export As**
- Saved as:
 - before_feedback.png
 - after_feedback.png

Step 5: Collect User Feedback

Feedback form link:

https://docs.google.com/forms/d/e/1FAIpQLScmGhF8DtR405Wj_unK_J808eaIum_1vxlw1AJh21mpfjybaw/viewform?usp=publish-editor

1. Prepare Feedback Form:

- Created a form using **Google Forms**
- Included questions like:
 - Which design looks more appealing?
 - Which layout is easier to understand?
 - Are texts readable?
 - Which color scheme do you prefer?

2. Share the Variants:

- Shared both layout images with users
- Provided instructions to compare and respond

3. Gather Feedback:

Feedback for BEFORE Design:

- Too many elements in header (crowded)
- Bright colors were distracting
- Text on images was hard to read
- Layout felt less organized

Feedback for AFTER Design:

- Clean and simple layout
- Pleasant and natural color scheme
- Better readability of text
- Improved spacing and alignment
- Easy navigation

Step 6: Iterate and Refine

1. Refine the Design:

Based on feedback:

- Reduced clutter in header

- Switched to green color palette
- Improved typography contrast
- Added overlays for readability
- Increased spacing between sections

2. Final Testing:

- Presented refined design to users
- Confirmed:
 - Better usability
 - Improved aesthetics
 - Clear visual hierarchy

RESULT:

Different app layouts and color schemes were successfully created using GIMP.

User feedback helped identify usability issues in the initial design.

The refined design showed significant improvement in clarity, aesthetics, and user experience.

CONCLUSION:

GIMP can be effectively used to design and evaluate UI layouts.

User feedback plays a crucial role in improving design quality, usability, and visual appeal.
