

EXERCISE: 7

Low-Fidelity Prototype & Wireframe Design Using Pencil Project

AIM:

The aim is to develop low-fidelity paper prototypes for the **ParkPilot** and convert them into digital wireframes using **Pencil Project**.

PROCEDURE:

Step 1: Creation of Low-Fidelity Paper Prototypes

1. Identification of Features

The core features of the ParkPilot application were identified as:

- User Login and Signup
- Home Dashboard with parking suggestions
- Search for parking locations
- Slot availability display
- Booking functionality
- User Profile management

2. Sketching Paper Prototypes

Basic layouts of the application screens were sketched using paper and pencil.

The following screens were designed:

- Login Screen
- Signup Screen
- Home Screen
- Profile Screen

Each screen included only essential elements such as:

- Input fields
- Buttons
- Navigation sections
- Content containers

3. Iteration and Refinement

The paper prototypes were reviewed and refined to ensure:

- Clear navigation flow
- Proper placement of UI elements
- User-friendly interaction

Step 2: Conversion to Digital Wireframes Using Pencil Project

1. Tool Installation

The **Pencil Project** tool was downloaded and installed from the official website.

2. Creation of New Document

A new document was created to design the wireframes for the ParkPilot application.

3. Designing Wireframe Screens

a) Login Screen Wireframe

- Title: ParkPilot
- Input fields: Email, Phone, Password
- Button: Login
- Link: Sign Up

The wireframe shows a login screen for 'ParkPilot'. At the top center is the title 'ParkPilot'. Below it are two input fields: 'Email' and 'Password'. Under the password field is a 'Login' button. At the bottom left, there is a link that says 'Don't have an account?' followed by 'Sign Up'.

b) Signup Screen Wireframe

- Title: Create Account
- Input fields: Name, Phone, Email, Address, Password
- Button: Sign Up

c) Home Screen Wireframe

- Header: ParkPilot
- Location section with “Change” option
- Search bar
- Action buttons:
 - Find Parking
 - Nearby Slots
 - Quick Park
- Recommended Parking section with slot details
- Recent Searches section
- Bottom navigation:
 - Home
 - Map
 - Profile

4. Use of Stencils and UI Elements

The following elements were used from Pencil Project:

- Rectangles (for layout structure)
- Text fields (for inputs)
- Buttons (for actions)
- Labels (for headings and descriptions)

5. Alignment and Organization

All elements were properly aligned and spaced to maintain:

- Consistency
- Readability
- Structured layout

6. Linking Screens

Navigation between screens was implemented using connectors:

- Login → Home
- Signup → Login
- Home → Profile
- Navigation bar links between all screens

7. Adding Annotations

Annotations were added to describe functionality, such as:

- User input fields
- Navigation actions
- Display of parking information

8. Exporting Wireframes

The final wireframes were exported in:

- PNG format (for images)
- PDF format (for documentation)

RESULT:

Low-fidelity paper prototypes for the ParkPilot application were successfully created and converted into digital wireframes using Pencil Project, clearly representing the structure, layout, and navigation flow of the application.
